EDUCATION

Northeastern University

Boston, MA

Bachelor's Degree in Computer Science and Economics

May 2027

Coursework: Algorithms & Data Structures, Object-Oriented Design, Software Engineering, Databases, Artificial Intelligence

Honors: University Honors Program, Honors Scholarship, Dean's List (Fall 2024, Spring 2025, Spring 2026)

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, JavaScript, Java, SQL

Frameworks & Libraries: Node.js, React, LangChain/LangGraph, PyTorch, FastAPI, Flask, Pandas, NumPy

Databases: PostgreSQL, MongoDB, MySQL, Redis, PgVector

Developer Tools: AWS (Lambda, EC2, CloudWatch), GCP, Docker, Kubernetes, Unix/Linux, CI/CD, Git, REST APIs

Concepts: Distributed Systems, System Design, Backend, Concurrency, Data Pipelines, AI Developer Tooling

EXPERIENCE

Amazon Web Services (AWS)

September 2026

Software Development Engineer Intern (Incoming)

Seattle, WA

Ripple

May 2026 – August 2026

Software Engineer Intern

San Francisco, CA

- Engineered an **XRP Ledger-aware** code review agent that surfaced **8 high-severity vulnerabilities** missed by static analysis and reduced manual review time by **34%**.
- Automated **protocol-to-SDK** code generation across Python, Go, Java, and JavaScript via **LLM-powered CI/CD** tooling.
- Built **real-time** observability systems to catch performance regressions across **distributed SDK pipelines** prerelease.

PwC (PricewaterhouseCoopers)

Sept 2025 – Jan 2026

AI Engineer Co-op

Boston, MA

- Built a **distributed multi-agent** system using Python, TypeScript, LangGraph, and MCP servers to auto-generate security documentation and architecture diagrams for enterprise codebases.
- Reduced documentation delivery time by **71%** across **4** engineering teams through end-to-end workflow automation.
- Architected **fault-tolerant** parallel pipelines for **1M+** LOC codebases using **Celery** with RabbitMQ and Redis.
- Deployed agent workflows as event-driven **AWS Lambda** functions with **Docker** and **CI/CD**.

Disrupt

Dec 2024 – Jan 2026

Software Lead

Boston, MA

- Built agentic **data acquisition**, ingestion, and validation pipelines for a **\$400M** data provider, cutting manual evaluation time by **40%** and surfacing **15+** previously undiscovered high-signal datasets.
- Engineered a full-stack analytics platform for a **\$140M** PE firm, cutting time-to-insight by **65%** and boosting non-technical user adoption by **25%** via **LLM-powered** natural language SQL querying.
- Developed **RESTful APIs** and microservices with input validation, error logging, and role-based access controls.
- Deployed **Dockerized** services on **GCP** with **Redis** for async processing across distributed workloads.

PlateMate

Apr 2025 – Sept 2025

Software Engineer Intern

Boston, MA

- Engineered **RESTful APIs** and backend pipelines in **Go** and **Node.js** delivering real-time restaurant recommendations.
- Reduced end-to-end response times by **25%** via parallel async execution and optimized **MongoDB** connection pooling.
- Improved recommendation accuracy by **37%** developing an **embedding-based** content filtering algorithm in **Python**.

PROJECTS

Parallax - Crypto Arbitrage Monitor | Python, Go, React, PostgreSQL, Redis, WebSockets

May 2026

- Engineered a **real-time** arbitrage detection system consuming live **WebSocket** feeds from Coinbase, Gemini, and Kraken with **sub-second** latency across any available trading pair.

Rover - AI Price Adjustment Agent | Python, TypeScript, React, FastAPI, PostgreSQL, Redis

March 2026

- Developed a **full-stack agentic platform** that scans Gmail receipts to identify price-adjustment opportunities and negotiate claims, securing **\$5,000+** in savings for **100+** active users across **26** retailers.

Clearview - Bias Detection Chrome Extension | JavaScript, NLP, Sentiment Analysis, Web Scraping

Feb 2025

- Built an **open-source** Chrome extension with **800+ installs** to detect political bias in news articles at **87% accuracy**.
